11-Oct-89	230th Contact: THE EASTER ISLAND MYSTERY EXPLAINED!	Giant statues reveal red hat secrets: study.	7-Sep
	77. When the colossal heads, created by stonecutters, were ready, then round tree trunks - which, with lianas, and so forth, were made into a tree trunk sledge - were shoved under the figures. 78. These triangularly-prepared tree-trunk sledges were not, however, set on the ground, rather on further palm trunks, which were likewise triangular and were arranged in a long row up to the destination. 79. In this way the colossal heads could be transported over great distances as if on tracks'	The researchers said the key to the mystery lies in their discovery of a road on the tiny Pacific island. The hats were built in a quarry hidden inside the crater of an ancient volcano, and then rolled by hand or on tree logs to the site of the statues, said the team from the University of Manchester and University College, London.
