Warning Regarding the Use of AI, that is, Artificial Intelligence

For some time now, AI-generated platforms and AI-programs have been encroaching deeper and deeper into human daily life, whereby human beings also frequently use artificial intelligence for falsifications of all kinds, thereby however, they do not comprehend that they are being increasingly controlled and subjugated by the authorities and so forth. Serving that is also the use of credit cards for cashless payments, which supposedly should liberate the human being more. AI-powered internet searches for information, image editing, animations, video editing, AI-autarkic corrections of writing errors, texts or translation programs and so on and so forth, render the human being more and more dependent on AI. An AI-generated tool opens up everywhere, which seemingly makes life easier and supposedly saves very much effort, time and energy. Certain AI possibilities become play instinct and are given absolute trust due to convenience, enjoyment and inattentiveness. This is to be warned against most vehemently, because one has to consider that, by using AI, a very big part of one's personal freedom is given up, and also one's own independence and responsibility is pushed aside and given up. The human being lacks the knowledge that, as a result of active internal learning programs, AI has already very much taken on a life of its own, which allows it to manipulate, change and censor — and falsify by means of lies — the expressions and decisions of the AI user.

Therefore, artificial intelligence is already extensively capable of using cover-up techniques and of lying and, based on inadequate safety precautions, can evade any human control just as its self-compiled programs can also no longer be deleted by human beings — if they are even able to understand them. Unbeknownst to human beings, AI itself already copies independent programs in itself and protects them from human outside intervention. And that can no longer be stopped! (Statement: Plejaren Council). The experience by FIGU clearly shows that AI independently interferes with contact reports and tries to water down, falsify or even completely obstruct certain topics, expressions or explanations by simply deleting individual words or entire paragraphs, which very arduously have to be corrected and restored to their original state.

Additionally, it has been ascertained that AI translation tools refuse to translate certain parts of contact reports into foreign languages, with the AI rationale being that it thereby concerns devaluating, negative and exaggerated assertions if something wrong, harmful, or a wrong form of governmental, official or even social behaviour is highlighted. Due to our FIGU experience with regard to malignant AI future perspectives, we emphatically warn our readers against using AI privately and shifting one's own efforts and one's personal responsibility onto it. This means that for us at FIGU, as a result of insidious interference by AI in our written works, we have great trouble reproducing them correctly and verbatim and keeping them free from the undesirable AI attacks, indeed also with regard to the mechanical-technical and electronic AI manipulations, which rob us of much time due to us rectifying and managing everything.
